

NAVIGATION SYSTEM MAP DISC COVERAGE

Map Database :

The Map Database information is stored on a DVD-ROM disc. The United States (excluding Alaska and Hawaii) and portions of Canada are contained in one disc. The map database includes the interstate freeways, state highways, country roads, major and general streets.

Detailed Areas :

The detailed areas are primarily located around metropolitan centers. All of the roads and the road network attributes are contained in the map database for these detailed areas. Road network attributes include information such as street names, street address, turn restrictions, etc. A detailed area will include all major highways, service roads, and residential roads. The detailed areas include points of interest (POI) such as restaurants, airports, banks, hospitals, police stations, gas stations, tourist attractions, historical monuments etc. The map database may not include data for newly constructed areas or map database corrections that are completed after the production of the disc. The Navigation System will provide full route guidance in the detailed map areas.

Limited Guidance Areas :

Any area that is not included in the detailed area list is a limited guidance area. These areas include the road maps but may not contain complete road network attribute information. Road network attributes include information such as street names, street address, turn restrictions, etc. Complete road network attribute information is needed to provide full route guidance.

Due to the incomplete road network attributes, route guidance is available only on some of the major roads in the limited guidance areas. The surrounding streets will be displayed on the map display but route guidance may not be given on these streets. Some POI categories, for example the city center POI category, and some street addresses are included in the limited guidance areas.

The navigation system will inform you by voice prompts when you are travelling into a limited guidance area where route guidance will not be available. The street maps and the directional arrow displayed on the navigation system can then be used to determine the remaining route to your destination.
